Turning Electricity into Revenue

Who We Are?

A smart energy technology company focused on automation, transparency, and reliability. We help businesses, properties, and communities manage electricity and EV charging with zero operational complexity and maximum control. Our solutions are built to eliminate manual billing, reduce losses, and enable real-time monitoring and revenue assurance through intelligent prepaid systems.

What We Do?

We design, manufacture, and deploy smart prepaid metering solutions and EV charging infrastructure that are secure, scalable, and built for real-world conditions. Our systems are engineered to deliver high uptime, remote operability, and seamless user experience.

Our products & services are fully customisable as per requirements.

Why Choose Us?

Uncompromising Quality : High Quality chips & PCB used

Advanced Connectivity : Wifi, 4G & BLE communication

Reliable & Secure System : Tamper Proof & Encrypted devices

Transparent & Fair Usage : Advanced Data Analytics of Usage

Service & Support : 24x7 support for end-users & partners

Industrial Standard Protocols : MQTT & OCPP 1.6

Traditional Charging vs VIZ- Smart Charging

Traditional EV Charging Infra

Individual wiring from each flat meter to each parking
100 Flats = 100 Parallel Cables

- 100 Separate Cables
- High Installation Cost
- More Civil Work & Conduits
- Multiple Meters / Upgrades
- No Benefit of EV Tariff

**HIGH COST, COMPLEX WIRING,
NO EV TARIFF BENEFITS**

**SMART CHOICE
WITH VJRA**

VIZ - Smart Charging Infra

Single connection to Green Meter & devices connected in series
100 Devices = 1 Smart Connection

- Single Cable from Green Meter
- Low Installation Cost
- Less Civil Work & Conduits
- Single Meter – Easy Management
- Enjoy EV Tariff Benefit (₹8.5 / Unit)
- Scalable & Future Ready

**LOWER COST, SIMPLE INFRASTRUCTURE,
EV TARIFF BENEFIT @ ₹8.5 / UNIT**

Traditional Charging vs VIZ- Smart Charging

Aspect	Traditional EV Charging	VIZ - Smart Charging
Infrastructure Complexity	Individual wiring from each flat meter to parking; for 100 flats, ~100 parallel cables; cluttered and complex layout	Single-point connection via Green Meter; devices connected in a network; clean, organized, and scalable setup
Installation Cost	High cable cost due to long-distance wiring; higher labor and civil work	Reduced cable usage; lower labor and installation cost; centralized system reduces overall capex
Metering & Tariff	Uses individual domestic meters ; no access to EV-specific tariffs; per-unit rates increases according to slab	Operates on a dedicated Green Energy Meter ; eligible for EV tariff (~₹8.5/unit), reducing charging cost
Scalability	Adding new chargers requires new wiring; not future-ready	Easily expandable ; add new devices without major rewiring
Maintenance & Management	Difficult to monitor multiple independent lines; no centralized control	Centralized dashboard with real-time monitoring ; easier maintenance and fault detection
User Experience	Manual usage; no tracking, automation, or no billing integration	QR-based access (Scan → Pay → Charge); automated, smart, and user-friendly
Builder Advantage	High upfront investment ; complex execution and planning	Lower capex ; premium amenity offering; future-ready infrastructure; strong selling point for buyers

How to charge EV in VIZ - Smart Charging devices ?

STEP 1:

Scan the QR Code on device using your camera or visit : **viz.vjratechnologies.com**

STEP 2:

Select Amount/ Units to charge your EV and **click PROCEED**

STEP 3:
Login / Signup
if using first time

How to charge EV in VIZ - Smart Charging devices ?

STEP 4:

Make the payment with **multiple payments options**

STEP 5:

Live Monitoring with **remote session stop** feature

View **Live Sessions & Past Sessions** in session tab

View **nearby available charges** on Home Page

How to charge EV in VIZ - Smart Charging devices ?

View all your **transaction** and **wallet balance**

Topup your wallet for smooth charging

View **Live Sessions & Past Sessions** in session tab

View **User Information** on Profile Page

Charging Cost Breakdown (Per Unit)

Component	Cost (₹/unit)
Green Meter Electricity Cost	7.73*
Platform Charges	2
Subtotal	9.73
GST (18%)	1.75
Final Cost to User	11.48

Products

Model	Description
VIZI-6A	Single Point - 2W EV Charger - WiFi
VIZI-16A	Single Point - 4W EV Charger - WiFi
VIZ3 - 6A	Three Point - 2W EV Charger - WiFi
VIZ3 - 16A	Three Point - 4W EV Charger - WiFi

*additional 18% GST applicable

*green meter tariff and fixed charges may vary as per DISCOMs

Terms & Conditions

1. Installation & Site Responsibility

- 1.1 Client must ensure proper electrical infrastructure, including earthing, MCB/RCCB protection, and load capacity.
- 1.2 All civil work (trenching, conduit, mounting structures) to be handled by the client unless explicitly included.
- 1.3 Safe and accessible installation location must be provided.
- 1.4 Power source (Green Meter or approved supply) must be ready before installation.

2. Connectivity Requirements

- 2.1 Stable WiFi network must be available at installation location.
- 2.2 Network downtime or poor signal affecting performance is not the company's responsibility.

3. Usage & Load Conditions

- 3.1 Devices must be used within specified load limits.
- 3.2 Overloading, bypassing safety mechanisms, or unauthorized modifications void warranty.
- 3.3 Only compatible EV chargers should be used.

4. Warranty Terms

- 4.1 3-year on-site warranty covers manufacturing defects only.
- 4.2 Excludes physical damage, fire, voltage fluctuations, overload, and misuse.
- 4.3 Damage due to third-party chargers or improper wiring is not covered.
- 4.4 Replacement/repair timelines subject to service availability.

5. Software & Platform Access

- 5.1 Admin access will be provided to authorized persons (Owner/Secretary/Manager).
- 5.2 Company retains rights to platform updates and feature changes.
- 5.3 Misuse of software (tampering, unauthorized access attempts) may lead to suspension.

6. Billing & Payments

- 6.1 Devices/software services may include platform or service charges.
- 6.2 Payment gateway charges and GST are applicable.
- 6.3 Delayed payments may result in service interruption.
- 6.4 Monthly billing cycle for payouts will be applicable.

7. Maintenance & Support

- 7.1 Basic remote support included.
- 7.2 On-site visits beyond warranty scope will be chargeable.

8. Liability & Safety

- 8.1 Company is not liable for damages due to electrical faults, fire, or improper installation.
- 8.2 Client is responsible for ensuring compliance with local electrical regulations.
- 8.3 Any loss due to misuse or unauthorized operation is not covered.

9. Termination / Deactivation

- 9.1 Company reserves the right to suspend services in case of misuse, non-payment, or policy violations.
- 9.2 Client may request deactivation but hardware costs are non-refundable.
